

"Hard to find donors"
"It might be time consuming , so help reaches patients late"
"Demand and supply gap is high".
"Will people actually use an app to donate?"
"Can we find adequate donors?"

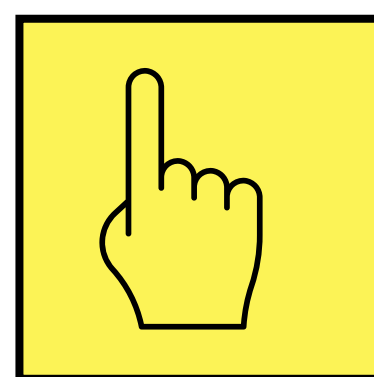

Is it safe ?
Will it actually reach people who need help?
How frequently can I donate?
What are the risks involved in this process?
Will people be interested in using this to donate ?
Can people misuse the medical information I share on this application ?
Helps maintain blood pressure and value?
