

**Project Design Phase-I**  
**Proposed Solution**

Date	9 NOVEMBER 2022
Team ID	PNT2022TMID33146
Project Name	Plasma Donor Application
Maximum Marks	2 Marks

**Proposed Solution:**

S .No.	Parameter	Description
1.	Problem Statement	To develop a mobile application that allows users to donate their plasma to those who need it mostly in times of emergency.
2.	Idea / Solution description	The application will allow users to register themselves on the portal for plasma donation so that recipients who require it can view their information so that they can get the plasma.
3.	Novelty / Uniqueness	When the user requests for plasma transmission, if there is lack of plasma at the time of request, automatically user will be marked in hold back list. Later when there is availability of plasma, the receiver waiting in hold back list will be alerted via calling system.
4.	Social Impact / Customer Satisfaction	The application is user friendly so that anyone with basic knowledge can access it. The application seamlessly connects the donor and the person who need it and also hospitals who have availability of the plasma.
5.	Business Model (Revenue Model)	The application is free to use and it comes under healthcare domain. It helps people who want to donate plasma to the people who need it. Data can be stored in IBM DB2 in cloud which reduces the overall cost incurred for developing the application.
6.	Scalability of the Solution	Since the app is going to store its data in cloud, it will continue to be efficient when large number of people uses it. Also when the number of requests for plasma increases, the call notification system will work fine without any disruption.
